ABOUT ME

I hold a degree in Computer Engineering and have a solid understanding of software development and databases. Through academic and personal projects, I have gained practical experience in building applications from scratch, problem-solving and systems architecture. I am proactive and a quick learner. I am currently looking for my first job.

PROJECTS

03/2026 – 04/2026

Sabora

I developed a full-stack (web) application designed to help users organise, share and discover recipes, with a focus on ease of use on mobile devices. This project allowed me to deepen my skills in Java with Spring Boot on the backend and React.js with TypeScript on the frontend, using Tailwind CSS. I implemented secure authentication (JWT and Google OAuth2), image storage via MinIO, and used PostgreSQL, with the infrastructure managed in Docker and the code controlled via Git.

09/2023 – 06/2024

HiddenCity

As my final-year project for my degree in Computer Engineering, I developed a mobile app that helps users discover and explore places of interest in a city. This project allowed me to develop my practical skills in Kotlin and database management using SQLite. I used Google APIs to integrate maps and location services, and the entire development process was managed using Git.
